

## Change Password

Translate: **EN**

Administrator which is connected to the server can change own password. The "File — Change Password" command or the corresponding context menu command will open the "Change Password" window:

Change password

Password must be complex enough, at least five symbols long and at least two of the three character types present - lowercase, uppercase, digit.

Server: MetaTrader server - 192.168.0.130:400

Login: 5

Old password: ••••••

New password: ••••••

Confirm: ••••••

OK Cancel

**Server** is the server description, address and port;

**Login** is the account (login) of the administrator, which is connected to the server;

**Old password** is the administrator's old password;

**New password** is the administrator's new password;

**Confirm** is the confirmation of administrator's new password.

Note: On server installing, an account of administrator will be created automatically (Login: 1; Password: manager). After the first authorization it is necessary to change the password or to create a new administrator's account and delete the above-mentioned one.
